|-------------------------------------------------------------------------------------------------------------|--------------|
| Table of Contents                                                                                           | 3-7          |
| Foreword                                                                                                    | 8-12         |
| <b>Section 1 The Science of Climate "Change"</b>                                                            | <b>13-67</b> |
| 1.0 Chapter 1 Is the World's Climate Warming?                                                               | 13-17        |
| <b>Table 1 Temperature Accuracy</b>                                                                         | <b>13</b>    |
| 1.1 Development of Weather Instrumentation                                                                  | 14-17        |
| <b>Table 2 Technological Developments in Weather</b>                                                        | <b>15-16</b> |
| 2.0 Chapter 2 Natural Disasters and Climate Change, Oh, My!<br>A Walk Through the Global Warming Land of Oz | 18-27        |
| 2.1 Floods                                                                                                  | 20-22        |
| 2.2 Hurricanes                                                                                              | 22-23        |
| 2.3 Droughts                                                                                                | 23           |
| 2.4 Tornadoes                                                                                               | 24           |
| 2.5 Wildfires: Disasters Where Man Lends a Hand                                                             | 24-27        |
| 2.5.1 Maintenance Deferred                                                                                  | 25-26        |
| 2.5.2 Fire Suppression                                                                                      | 26-27        |
| 3.0 Chapter 3 Is Man Capable of Changing the Global Climate?                                                | 28-49        |
| 3.1 The Earth's Heat Management                                                                             | 28-31        |
| 3.1.1 Energy From the Sun                                                                                   | 28-29        |
| 3.1.2 Residual Heat and Radioisotopic Heating                                                               | 29-30        |
| 3.1.3 Heat Losses                                                                                           | 30           |
| 3.1.4 Earth's Insulation-- Clouds                                                                           | 30           |
| 3.1.5 Earth's Surficial Heat Storage System-- Water                                                         | 31           |
| 3.2 Sunspots and Climate                                                                                    | 31-35        |
| <b>Figure 1 Heat Exchange</b>                                                                               | <b>32</b>    |
| <b>Figure 2 Sunspots versus Irradiance</b>                                                                  | <b>33</b>    |
| <b>Figure 3 Sunspots from 1650 to 2006</b>                                                                  | <b>34</b>    |
| 3.3 Carbon Dioxide and Oxygen Mechanics                                                                     | 35-36        |
| 3.4 Carbon Dioxide Measurements                                                                             | 36-37        |
| 3.5 Volcanism and its Relationship to Climate Change                                                        | 37-38        |
| <b>Figure 4 Carbon Dioxide Sources</b>                                                                      | <b>39</b>    |
| <b>Figure 5 Oxygen Sources</b>                                                                              | <b>40</b>    |
| 3.6 Carbonate Disintegration and its Impact on the                                                          |              |

|                                                                                                     |              |
|-----------------------------------------------------------------------------------------------------|--------------|
| Atmosphere                                                                                          | 41           |
| 3.7 Respiration-Produced Carbon Dioxide and the Atmosphere                                          | 41-42        |
| 3.8 Plant-Produced Carbon Dioxide and the Atmosphere                                                | 42           |
| 3.9 Human-Produced Carbon Dioxide                                                                   | 42-43        |
| 3.10 Photosynthesis and its Effect on the Atmosphere                                                | 43-44        |
| 3.11 Carbon Sequestration and the Atmosphere                                                        | 44           |
| 3.12 Carbon Sequestered by Plantlife                                                                | 44-45        |
| 3.13 Carbon Sequestered by Animal Life                                                              | 45           |
| 3.14 Carbon Sequestered by Carbonates and Bicarbonates                                              | 46           |
| 3.15 Summary of Carbon Dioxide Sources                                                              | 46           |
| <b>Figure 6 Carbon Sequestration</b>                                                                | <b>47</b>    |
